

$$y_3 = \text{Relu}(W_{13}x_1 + W_{23}x_2 + b_3)$$

$$y_4 = \text{Relu}(W_{14}x_1 + W_{24}x_2 + b_4)$$

$$y_3 = \text{Relu}(W_{13}x_1 + W_{23}x_2 + b_3)$$

$$y_4 = \text{Relu}(W_{14}x_1 + W_{24}x_2 + b_4)$$

$$y_5 = W_{35}y_3 + W_{45}y_4 + b_5$$

$$y_6 = W_{36}y_3 + W_{46}y_4 + b_6$$

$$y_7 = W_{37}y_3 + W_{47}y_4 + b_7$$

Parameter Update 1

Chowdhury Mofizur Rahman

April 22, 2025

At first start with the output nodes. Define loss function and differentiate loss function with respect to all the output nodes.

$$\begin{aligned} Loss &= \frac{1}{2} \{ (Ob_5 - Y_5)^2 + (Ob_6 - Y_6)^2 + (Ob_7 - Y_7)^2 \} \\ \frac{dLoss}{dY_5} &= \frac{1}{2} \cdot 2 \cdot (Ob_5 - Y_5) \cdot (-1) = -Err_5 \\ \frac{dLoss}{dY_6} &= \frac{1}{2} \cdot 2 \cdot (Ob_6 - Y_6) \cdot (-1) = -Err_6 \\ \frac{dLoss}{dY_7} &= \frac{1}{2} \cdot 2 \cdot (Ob_7 - Y_7) \cdot (-1) = -Err_7 \end{aligned}$$

Write the expressions for output nodes

$$Y_5 = W_{35}Y_3 + W_{45}Y_4 + b_5$$

$$Y_6 = W_{36}Y_3 + W_{46}Y_4 + b_6$$

$$Y_7 = W_{37}Y_3 + W_{47}Y_4 + b_7$$

Now you can differentiate loss function with respect to all the output layer parameters $W_{35}, W_{45}, W_{36}, W_{46}, W_{37}, W_{47}, b_5, b_6, b_7$ using chain rule

$$\begin{aligned} \frac{dLoss}{dW_{35}} &= \frac{dloss}{dY_5} \cdot \frac{dY_5}{dW_{35}} = -Err_5 \cdot Y_3 \\ \frac{dLoss}{dW_{45}} &= \frac{dloss}{dY_5} \cdot \frac{dY_5}{dW_{45}} = -Err_5 \cdot Y_4 \\ \frac{dLoss}{dW_{36}} &= \frac{dloss}{dY_6} \cdot \frac{dY_6}{dW_{36}} = -Err_6 \cdot Y_3 \\ \frac{dLoss}{dW_{46}} &= \frac{dloss}{dY_6} \cdot \frac{dY_6}{dW_{46}} = -Err_6 \cdot Y_4 \\ \frac{dLoss}{dW_{37}} &= \frac{dloss}{dY_7} \cdot \frac{dY_7}{dW_{37}} = -Err_7 \cdot Y_3 \\ \frac{dLoss}{dW_{47}} &= \frac{dloss}{dY_7} \cdot \frac{dY_7}{dW_{47}} = -Err_7 \cdot Y_4 \\ \frac{dLoss}{db_5} &= \frac{dloss}{dY_5} \cdot \frac{dY_5}{db_5} = -Err_5 \\ \frac{dLoss}{db_6} &= \frac{dloss}{dY_6} \cdot \frac{dY_6}{db_6} = -Err_6 \\ \frac{dLoss}{db_7} &= \frac{dloss}{dY_7} \cdot \frac{dY_7}{db_7} = -Err_7 \end{aligned}$$

Now using gradient descent approach the update equations for all the output layer parameters are:

$$W_{35} = W_{35} + \eta Y_3 \cdot Err_5$$

$$W_{45} = W_{45} + \eta Y_4 \cdot Err_5$$

$$W_{36} = W_{36} + \eta Y_3 \cdot Err_6$$

$$W_{46} = W_{46} + \eta Y_4 \cdot Err_6$$

$$W_{37} = W_{37} + \eta Y_3 \cdot Err_7$$

$$W_{47} = W_{47} + \eta Y_4 \cdot Err_7$$

$$b_5 = b_5 + \eta Err_5$$

$$b_6 = b_6 + \eta Err_6$$

$$b_7 = b_7 + \eta Err_7$$

Now consider the hidden nodes 3 and 4. Write the expressions for Y_3 and Y_4 .

$$Y_3 = Relu\{W_{13} \cdot X_1 + W_{23} \cdot X_2 + b_3\}$$

$$Y_4 = Relu\{W_{14} \cdot X_1 + W_{24} \cdot X_2 + b_4\}$$

Now differentiate the Loss function with respect to hidden outputs Y_3 and Y_4 . Both nodes 3 and 4 have parents 5, 6 and 7. Following the chain rule

$$\frac{dLoss}{dY_3} = \frac{dloss}{dY_5} \cdot \frac{dY_5}{dY_3} + \frac{dloss}{dY_6} \cdot \frac{dY_6}{dY_3} + \frac{dloss}{dY_7} \cdot \frac{dY_7}{dY_3} = (-Err_5) \cdot W_{35} + (-Err_6) \cdot W_{36} + (-Err_7) \cdot W_{37}$$

$$\frac{dLoss}{dY_4} = \frac{dloss}{dY_5} \cdot \frac{dY_5}{dY_4} + \frac{dloss}{dY_6} \cdot \frac{dY_6}{dY_4} + \frac{dloss}{dY_7} \cdot \frac{dY_7}{dY_4} = (-Err_5) \cdot W_{45} + (-Err_6) \cdot W_{46} + (-Err_7) \cdot W_{47}$$

Now we can differentiate Loss function with respect to all the hidden layer parameters W_{13} , W_{23} , W_{14} , W_{24} , b_3 and b_4

$$\frac{dLoss}{dW_{13}} = \frac{dLoss}{dY_3} \cdot \frac{dY_3}{dW_{13}} = \{(-Err_5).W_{35} + (-Err_6).W_{36} + (-Err_7).W_{37}\}.Relu'(W_{13}.X_1 + W_{23}.X_2 + b_3).X_1$$

$$\frac{dLoss}{dW_{23}} = \frac{dLoss}{dY_3} \cdot \frac{dY_3}{dW_{23}} = \{(-Err_5).W_{35} + (-Err_6).W_{36} + (-Err_7).W_{37}\}.Relu'(W_{13}.X_1 + W_{23}.X_2 + b_3).X_1$$

$$\frac{dLoss}{dW_{14}} = \frac{dLoss}{dY_4} \cdot \frac{dY_4}{dW_{14}} = \{(-Err_5).W_{45} + (-Err_6).W_{46} + (-Err_7).W_{47}\}.Relu'(W_{14}.X_1 + W_{24}.X_2 + b_4).X_1$$

$$\frac{dLoss}{dW_{24}} = \frac{dLoss}{dY_4} \cdot \frac{dY_4}{dW_{24}} = \{(-Err_5).W_{45} + (-Err_6).W_{46} + (-Err_7).W_{47}\}.Relu'(W_{14}.X_1 + W_{24}.X_2 + b_4).X_2$$

$$\frac{dLoss}{db_3} = \frac{dLoss}{dY_3} \cdot \frac{dY_3}{db_3} = \{(-Err_5).W_{35} + (-Err_6).W_{36} + (-Err_7).W_{37}\}.Relu'(W_{13}.X_1 + W_{23}.X_2 + b_3)$$

$$\frac{dLoss}{db_4} = \frac{dLoss}{dY_4} \cdot \frac{dY_4}{db_4} = \{(-Err_5).W_{45} + (-Err_6).W_{46} + (-Err_7).W_{47}\}.Relu'(W_{14}.X_1 + W_{24}.X_2 + b_4)$$

Therefore the updated equations for all the hidden layer parameters are as follows:

$$W_{13} = W_{13} + \eta \cdot (Err_5.W_{35} + Err_6.W_{36} + Err_7.W_{37}) \cdot Relu'(W_{13}.X_1 + W_{23}.X_2 + b_3).X_1$$

$$W_{23} = W_{23} + \eta \cdot (Err_5.W_{35} + Err_6.W_{36} + Err_7.W_{37}) \cdot Relu'(W_{13}.X_1 + W_{23}.X_2 + b_3).X_2$$

$$W_{14} = W_{14} + \eta \cdot (Err_5.W_{45} + Err_6.W_{46} + Err_7.W_{47}) \cdot Relu'(W_{14}.X_1 + W_{24}.X_2 + b_4).X_1$$

$$W_{24} = W_{24} + \eta \cdot (Err_5.W_{45} + Err_6.W_{46} + Err_7.W_{47}) \cdot Relu'(W_{14}.X_1 + W_{24}.X_2 + b_4).X_2$$

$$b_3 = b_3 + \eta \cdot (Err_5.W_{35} + Err_6.W_{36} + Err_7.W_{37}) \cdot Relu'(W_{13}.X_1 + W_{23}.X_2 + b_3)$$

$$b_4 = b_4 + \eta \cdot (Err_5.W_{45} + Err_6.W_{46} + Err_7.W_{47}) \cdot Relu'(W_{14}.X_1 + W_{24}.X_2 + b_4)$$

$$Y3 = \text{Relu}(0.5 \times (-2.5) + 0.6 \times 0.37 + 1.6) = 0.57$$

$$Y4 = \text{Relu}(0.5 \times (-1.5) + 0.37 \times 0.4 + 0.7) = 0.1$$

$$Y5 = 0.57 \times (-0.1) + 0.1 \times 1.5 = -1.9$$

$$Y6 = 2.4 \times 0.57 + 0.1 \times (-5.2) + 0 = 0.85$$

$$Y7 = 0.57 \times (-2.2) + 0.1 \times 3.7 + 1 = 0.12$$

$$\text{Err5} = 1.9 \quad \text{Err6} = 0.15 \quad \text{Err6} = -0.12$$

$$W35 = -0.1 + 0.1 \times 0.57 \times 1.9 = 0.01$$

$$W46 = -5.2 + 0.1 \times 0.1 \times 0.15 = -5.19$$

$$b5 = -2 + 0.1 \times 1.9 = -1.81$$

$$b7 = 1 + 0.1 \times (-0.12) = 0.99$$

$$W13 = -2.5 + 0.1 \times ((-0.1) \times 1.9 + 2.4 \times 0.15 + (-2.2) \times (-0.12)) \times \text{Relu}'(0.57) \times 0.5 = -2.28$$

$$W24 = 0.4 + 0.1 \times (1.5 \times 1.9 + (-5.2) \times 0.15 + 3.7 \times (-0.12)) \times \text{Relu}'(0.1) \times 0.37 = 1.0$$
